

Job Title: Manufacturing Engineering Manager

Reports to: Plant Manager

Location: Fort Worth

General Summary

The Manufacturing Engineering Manager is responsible for the strategic development, management, and execution of our continuous improvement objectives and the day-to-day management of our manufacturing support team, including continuous improvement engineers, manufacturing engineers, and our maintenance group.

Essential Duties and Responsibilities

1. Manage, train and develop manufacturing support team to establish and ensure top level performance.
2. Prioritize, manage, and resolve manufacturing process, equipment/tooling and maintenance problems in real-time to ensure the best outcomes for our customers and the business.
3. Identify, plan, manage and execute continuous improvement actions that reduce cost, cycle time, and lead time while increasing safety, quality, and repeatability.
4. Actively support product development efforts from the initial phase through product launch with a primary focus on design for manufacturability while meeting customer specifications.
5. Oversee the creation of equipment specifications for purchasing of capital equipment and the design of tooling, jigs and fixtures to ensure effective results.
6. Manage the creation, implementation, and ongoing improvement of manufacturing process, cutsheets, and work order sequence documentation.
7. Develop and maintain a positive corporate image through promotion, training and adherence to all company core values, policies, and procedures.

Preferred Traits, Experience, and Education

1. Bachelor's Degree in Manufacturing, Engineering, or similar technical field; skilled with MS Office suite of software, especially excel, data analysis, and CAD or SolidWorks
2. 7+ years of manufacturing engineering experience with demonstrated growth and people management skills, preferably in a configure-to-order sheet metal or extruded aluminum manufacturing sector with a strong emphasis on lean concepts, tools, and kaizen leadership.
3. Hands on, driven, analytical, results oriented, customer-centric, self-starter with strong change management skills and mechanical aptitude that enjoys leading diverse teams.

Other Duties and Responsibilities

This job may include other duties and responsibilities as assigned by the supervisor. These may change as needed.

Work Environment

Fast paced, team-oriented, factory environment with the majority of the time on your feet with occasional travel required.
